Full-stack Developer

Professional experiences:

✓ **Food delivery web app: e-LAD.**

- I built this project due to the increasing demand for such services in recent years. The objectives of the project focused on two main points, first, to facilitate the ordering process for customers who do not have enough time to prepare their meals themselves or visit their favorite restaurants. The second point is to allow restaurants to expand their reach and target more consumers. Ease of use and diversity of payment methods were among the features that I took care of during the development process.
- The programming languages and design tools that I used in the project are PHP7 OOP, MySQL, JavaScript, Ajax, jQuery, Pusher, html5, Css3, Figma, Photoshop, UML method, Gantt Project.
- For more details about the project: <https://www.Eddamoun.com/projects/elad.html>

✓ **e-Learning platform: e-Platform.**

- I built this project to allow teachers to share their educational courses with their students and interact with them. Students can browse materials for each teacher and subscribe to the teacher's group to be able to benefit from the published content and interact with the teacher or other students. The teacher has the right to manage his group by adding, removing, or modifying courses or students.
- The programming languages and design tools that I used in the project are Java JEE, MySQL, JavaScript, html5, Css3, Photoshop.
- For more details about the project: <https://www.Eddamoun.com/projects/eplatform.html>

✓ **Medical consulting desktop app: AWCM.**

- I built this desktop project by using instant messaging technology, to enable the doctor to follow the updates of his clients.

- The programming languages and design tools that I used in the project are C#, WebSocket
 - For more details about the project: <https://www.Eddamoun.com/projects/awcm.html>
- ✓ **Inventory management desktop app: SGE project.**
- This project aims to allow companies to manage their inventory, to ensure continuity of work, and avoid loss of equipment.
 - The programming languages and design tools that I used in the project are C#, SQL
 - For more details about the project: <https://www.Eddamoun.com/projects/sgeproject.html>
- ✓ **To-do List web app.**
- This web application allows users to add, modify, or delete their daily tasks with the ability to schedule them. The app also provides the feature to display completed, overdue, achieved tasks.
 - The programming languages and design tools that I used in the project are PHP, JavaScript, Html5, Css3, Figma.
 - For more details about the project: <https://www.Eddamoun.com/projects/todolist.html>
- ✓ **Room reservations.**
- This web application is for small and medium hotels to facilitate the process of managing room reservations. The service allows the manager to manage the available rooms easily.
 - The programming languages and design tools that I used in the project are PHP, JavaScript, Html5, Css3, Figma.
 - For more details about the project: <https://www.Eddamoun.com/projects/bookingapp.html>
- ✓ **2014 – 2017:** 4 years of experience in trade.

Education:

- **2020:** Graduate Diploma in Computer Engineering.
- **2017 – 2020:** Software Engineering Institute - Web development branch.
- **2013 – 2014:** Abdelmalek Essaadi University - Faculty of Sciences, Physics.
- **2012:** Scientific bachelor in experimental sciences, Physics branch.

Skills:

- **Systems:** Database Management, MySQL, SQL, Oracle, Microsoft access.

- **Project analysis:** The Unified Modeling Language (UML), Merise.
- **Programming languages:** PHP7, Html5, Css3, JavaScript, Ajax, jQuery, Python, Java, Java Jee, C, C#, VB.Net
- **Office programs:** Word, Excel, PowerPoint, Photoshop, Figma, Gantt Project.

Language skills

- **Arabic:** Excellent.
- **English:** Good.
- **Dutch:** Good.
- **French:** Medium.
- **Spanish:** Medium.
